

# 'This is a different boat thanks to WESMAR Stabilizers' ...Owner of 47 Grand Banks

**The Beautiful Grand Banks Design delivers speed, range and efficiency and with the High Tech WESMAR Stabilizers a smooth ride in rough seas as well!**

The Mediterranean Sea is a beautiful and historic destination for many yachtsmen. But it can be very, very rough much of the time. With this in mind, the owner of the MY SPOTT, came to Arie de Boom Services, WESMAR's dealer in France, looking for equipment that would keep his passengers from getting seasick and his children safe when his boat was in choppy waters.

Pierre Marechal, Arie de Boom Manager, suggested a WESMAR roll fin stabilizer system explaining that WESMAR is widely recognized as the best product for stabilizing boats during rough seas. He suggested the RS700 would be the perfect fit.

The vessel recently completed its sea trials with the new WESMAR stabilizers installed, and the MY SPOTT was delivered to its home port, a 50 mile ride during bad weather conditions, with the owner on board.

"The owner is really the happiest customer in the world and told us that his boat was a different boat with the stabilizers installed. Glasses, bottles and other objects were no longer moving around during passage. It was really impressive, especially when we turned off the stabilizers to demonstrate the

difference without stabilization."

"A friend of his, who owns the same model boat, has already decided to install the WESMAR stabilizers on his boat next September," reported Pierre Marechal.

Arie de Boom Services, has been a leading service yard and yacht sales company in Port de La Rague Bay of Cannes for 30 years. Among their many capabilities are mechanical and electrical work, yacht maintenance, and renovation. Their installation was impressive.

The choice of WESMAR's electronic gyro system, which cycles at 100 times per second delivering lightning speed reaction was the right decision for this owner. Now he no longer worries about his children's safety and the comfort of his other passengers during rough seas.

Not only is the WESMAR the fastest gyro on the market, but the system provides the operator a trim control feature and sensitivity adjustment. With the WESMAR, reaction is rapid and all electronically driven. The electronic gyro sensor sends information about roll velocity and acceleration directly to WESMAR's proportional valves, which react instantaneously to rotate the fins. When a desired lift is achieved to counteract the rolling force of a wave, WESMAR's closed proportional hydraulic system instantly interacts with the electronic gyro to correct the rolling. This coordinated response stabilizes the vessel immediately.

The MY SPOTT owner's decision to install WESMAR roll fin stabilizers will pay off in greater comfort and less stress in rough weather for years to come.
