

Stabilizer Customer Report

Sea of Cortez Much More Comfortable Thanks to the WESMAR Stabilizers

"With the Stabilizers, my boat is better than new," said Larry Roff, retired Colorado businessman, when asked how he likes his WESMAR Roll Fin Stabilizers. Roff spends about 50 % of his time on his 49-foot Albin Trawler, the Voyager cruising and fishing in the Sea of Cortez. When we spoke with him he was heading for a 2-week fishing trip to Mexico looking for Marlin, Dorado and Sailfish with 6 guests. The comfort of his family and friends is important to him and that is what led to the installation of the WESMAR Stabilizers.

"This is a totally different boat with the stabilizers," says Roff. We keep it in San Carlos, Mexico (south of Tucson), and it's an east to west crossing with north-south winds every time we fish. The boat is a tall trawler that rolled like a barrel before the stabilizers were installed. That has all changed now. Instead of everything hopping around, we cross smoothly, taking the 4 to 6 foot beam swells in total comfort."

Roff purchased the boat in 2001 and installed the stabilizer system himself in November 2002, with

guidance from the WESMAR factory. He was impressed with how smoothly the installation was accomplished. "Nobody in Mexico would do it and WESMAR was the only company willing to work with me doing my own installation. The other manufacturers wanted me to take the boat to the States, a rough trip without Stabilizers."

The Albin is a beautifully designed sport fishing trawler described by the manufacturer as a Fishing Machine for the Cruising Family. The diesel powered vessel has complete galley, dining, and

comfortable sleeping. Roff says he easily accommodates 8 people. Fishing is made easy with a water holding tank, cockpit and command bridge. All this is made more enjoyable thanks to the WESMAR Stabilizers.
