

## 'Rugged And Quiet' Describe WESMAR's New DC Pro Bow and Stern Thrusters

Installer: "The Workmanship on the WESMAR Bow Thruster is AMAZING."

Owner: "The WESMAR DC Pro is much quieter than other systems, you can hardly hear it."

**"I fell in love with this system. It's quieter and smoother and does everything WESMAR said it would do. It is rugged, and I like that it has all metal parts."**

After installing WESMAR's new continuous operation bow thruster on a 50 Foot SeaRay, Phil Acosta of Marine Services of California says, "I fell in love with this system. It's quieter and smoother and does everything WESMAR said it would do. It is rugged, and I like that it has all metal parts."

After installing the new system on a 1997 SeaRay 500 Express, Acosta, is enthusiastic about the new DC Pro Bow Thruster System that offers continuous operation with a dc electric thruster for those who do not want to install a more expensive hydraulic system.

"People are buying bigger and bigger boats and they don't want to operate them without a

bow thruster," says Acosta, who began with a mobile installation van 14 years ago and today has a 12,000 square foot showroom on 2.5 acres in the Stockton (California) Delta where he operates a company that sells boats and installs and services marine equipment. He represents new pontoon boats and is a full brokerage business for pre-owned boats. His facility includes a 50-ton, 20 foot wide lift. "We do hull and mechanical work, gas and diesel, installations and maintenance." With this capability and experience, it is no surprise that people look to him for advice on bow thrusters. When we spoke to Acosta he was installing another WESMAR system on a 71 foot Burger Yacht and had quotes out for other WESMAR thruster installations. Richard Zavala, owner of the 50-ft SeaRay with the new WESMAR DC Pro thruster says he particularly likes the system's quietness.

"I belong to the North Bay

(California) SeaRay Club where many members own bow thrusters. The WESMAR is much quieter than other systems in the club, you can hardly hear it.

"I think the continuous operation is also a big deal. A lot of times it takes 3 to 4 minutes to dock and this feature saves me from losing position."

**WESMAR's Powerful Stainless Steel DC Pro is available in 5 to 23 HP; 24-48 Volts**
