

WESMAR Central Hydraulic System Saves Yacht Owner Thousands

Channel Coast Yacht Services in Oxnard, California has an excellent reputation for quality service, vessel knowledge and reasonable prices. The yard travels all over the United States helping pleasure boaters and specializes in everything. Headed by Mark Hermann, Channel Coast runs a full-scale operation and has experience in almost every type of boating maintenance issue.

We recently had a chance to talk to Hermann in Illwaco, Washington, where he was installing a WESMAR DPC 12" bow thruster and a 6 square foot roll fin stabilizer package that will share the same hydraulic system on a 48' Krogen owned by Dr. Dolph McCranie.

"Dr. McCranie wanted both a bow thruster and stabilizers and with a WESMAR package, he could afford both," says Hermann. He installed a 750 psi WESMAR designed hydraulic system for both the thruster and the stabilizer. Necessary hydraulic pressure for either application is always on standby. "Dr. McCranie plans to cruise around the world and he wanted to ensure that he

This 48' Krogen was outfitted with a WESMAR bow thruster and stabilizers for maximum comfort and safety for its world-traveling owners.

would have a safe and relaxing trip," adds Hermann.

"People are unaware of stabilizers, and they become very enthused when they learn what a WESMAR stabilizer can do for them. The stabilizer market has to take off because there are numerous owners who have spent a tremendous amount of money on their beautiful boats and later discover that the most important thing for them and their family is comfort and safety. I have been impressed with WESMAR's product support on the West Coast--their loyalty has been impressive."

Now the bridge of the

McCranie's boat has a simple to use stabilizer joystick control panel for easy control of both the bow thruster and the stabilizer system. If safety and relaxation are Dr. McCranie's major concerns, he is truly prepared to cruise anywhere in the world.
