

Stabilizer & Thruster Customer Report

Brothers Applaud WESMAR's Modern Design, Product Performance, and Customer Service

"Unless you use stabilizers, you have no real idea of the comfort they provide. Imagination or hope of stability will not carry you close enough to the reality of comfort," said Tibor Burian (owner with his brother, Andrew, of a new 52-foot Grand Banks Motoryacht TEROUKA) after his first Mediterranean cruise with WESMAR roll fin stabilizers installed.

Hydraulique Marine Service in France installed a WESMAR Model RS600 stabilizer system, and a WESMAR Vortex bow thruster, Model 2-12, 25 horsepower and hydraulics on the M/Y TEROUKA.

Tibor said he chose WESMAR because of its modern design. "I can tell you that I underestimated the results. I particularly appreciate the continuous split-second reactions without any intermediary "shocks" or "knocks."

"It was a pleasure to deal with WESMAR. The equipment was sent on time, and WESMAR did what they said they would do. The equipment is very, very good."

Hydraulic Marine Service (France) sent these installation photos of the installation of the WESMAR roll fin stabilizers and bow thrusters on the 52-foot Grand Banks TEROUKA.

The Burians installed the WESMAR bow thruster at the same time; and Tibor says it "comes in handy when maneuvering in port, under strong currents or cross winds. "In addition to the quality of the equipment, the help, cooperation, and advise from WESMAR was great. Their patience and professionalism are second to none. What a pleasure to work with them.

"WESMAR can count on me for any help I can give, because I would, with their product and with their human approach to business, not mislead their eventual customers," said Tibor. His brother Andrew

agrees, saying, "It was a pleasure to deal with WESMAR. The equipment was sent on time, and WESMAR did what they said they would do. The equipment is very, very good."
