FOR IMMEDIATE RELEASE

WESMAR to Feature World-Class Thrusters and Stabilizers At the International WorkBoat Show

Woodinville, WA- 10 Nov. 2008 – Every year, the International WorkBoat Show brings thousands of buyers to New Orleans looking to purchase world-class marine equipment. This year, WESMAR will be displaying their distinguished ABS design approved DP 1 Model V2-20 NS Vortex dual prop all stainless steel bow thrusters and their Model V2-24 as well as Active Gyro Stabilizers at booth number #1441 in New Orleans Dec. 3-5.

WESMAR's rugged bow thrusters provide calculated movement of commercial vessels whether working in the off shore oil industry or fishing in adverse weather conditions. WESMAR's counter rotating propeller design was developed to provide up to 40% more thrust with the same tunnel size and same input power. Turning in tight quarters, holding position, and docking in challenging environments are easier than ever with WESMAR's world-class thrusters.

In addition to their powerful bow thrusters, WESMAR will be showcasing their cutting edge roll fin stabilizers for commercial applications. WESMAR's stabilizers have proven to increase hull speed, save fuel, improve comfort, provide auto pilot tracking, and lessen the risk of accidents.

One fisherman said he has saved fuel, cut down traveling time, enhanced safety for his crew, and improved his product by using his WESMAR stabilizers. He also appreciates the added stability and lift he now has in rough water. By maintaining full boat speed in rough water conditions, his boat has become more efficient and safe.

The design of WESMAR's bow thrusters and stabilizers meet the company's focus on low maintenance, easier retrofit and upgrades, more accurate control, and extremely reliable operation. Aimed at satisfying the needs of crew boats, supply boats, and tug boats to name a few, WESMAR prides itself on building extremely durable, long-lasting products for commercial use.
